P/O Chak No.75 S.B

Sargodha, Punjab

I'm a Front-End developer and a BS Computer Science student, presently in my 5th semester. My thing is to master front-end development by erecting clean, responsive, and stoner-friendly websites using solid fundamentals and ultramodern tools. I specialize in HTML, CSS, JavaScript, ReactJS, Bootstrap, TailWindCSS and have hands-on experience with design packet like Vite and version control with Git/ GitHub. I've worked on real- world systems like a YouTube mini clone, a responsive product website, and an AR- grounded Android app (Xperience Study Guide). I've also erected tackle- integrated systems similar as a voice-controlled robot car and a density-based traffic control system model, reflecting my curiosity beyond the cyber surfer. Alongside development, I enjoy tutoring the basics of web development (HTML, CSS, JS) and helping others start their trip. I concentrate on writing clean law, erecting for all screen sizes, and icing every interface is intuitive and visually polished. I'm presently seeking freelance work, internships, or cooperative systems where I can contribute and grow as a front- end inventor. Let's connect and make commodity poignant together.
